*Trust*

# We now live in a hyper-connected world and a digital economy

POLARYS

# We are more connected than ever before

**1941** — First computer

**1950s** — First business computer

**1960s** — First computer passwords

**1970s** — First personal computers

**1980s** — First mobile computers

**1990s** — First blogs + e-readers + social media + smart watches + Internet of Things

**2000s** — First tablet computers + camera phones

POLARYS

# Today

**Nearly 60% of the world's population and more than 88% of Singapore's people use the internet + there are more than 17 billion devices connected to the internet worldwide**

POLARYS

# And with great power, comes great responsibility

**1960s**

First troll + passwords stollen

**1970s**

First major cyber crimes

**1980s**

First viruses in the ‘wild’ + self-replicating worms + ‘Nigerian Prince’ scams + large-scale ransomware + Trojan horses + computer espionage + computer hacking used for warfare

**1990s**

Cyber gangs begin engaging in online warfare + first macro-viruses + mass-emailing viruses

**2000s**

First internet-wide cyber attack + online meeting places launched for black hat hackers

POLARYS

# Today

**Cyber attacks are one of the top five most likely global risks and one of the top ten highest impact global risks + the number of cybersecurity incidents each year is growing by 33%**

POLARYS

**In the Asia-Pacific region, organisations that suffer a data breach experience significant losses**

**64% lose more than USD500,000**

**51% lose more than USD1 million**

***Globally, 60% of all businesses that suffer a data breach will go bankrupt within six months***

POLARYS

# How important is trust to your organisation's success?

POLARYS

Technology can enhance your organisation, but one security incident could ruin it

# Digital transformation security

***Polarys protects systems, data and intellectual property as your IT evolves***

POLARYS

When you run hundreds, thousands or millions of systems, how can you trust them all?

# Secure software-defined data centre transformation

*Polarys provides a gold standard for secure data centres — we design configurations that perfectly suit the business needs of financial, healthcare and government organisations at any stage and on any scale*

POLARYS

**How can you trust a third party with your most sensitive data, secrets and intellectual property?**

# Secure cloud migration

***Polarys plans, executes and secures transitions from traditional onsite storage and network infrastructure to modern cloud-based systems***

POLARYS

Custom applications can allow you to achieve new heights, but one vulnerability could bring you crashing down to the bottom

# Secure software development life cycle

***Polarys ensures software is secure from inception to decommission***

POLARYS

# No challenge is too complex

**Rare cybersecurity know-how**

**Multi-lingual team (English, French and Hebrew)**

# POLARYS

**Excellent track-record in securing digital transformation projects**

**All-in-one solution**

**Strong cyber products and services partner network**

POLARYS

# Meet our leaders

Polarys grew out of a need for cybersecurity consultants that could provide quality end-to-end solutions. Our founders, Hemed and Mike, both worked for large organisations that expected the best results within unrealistic timeframes when the required skills were not available internally or externally. The solutions offered by most cybersecurity consultancies were often outdated, irrelevant or missing vital components. Sometimes, consultants couldn't offer a solution at all. So Hemed and Mike often had to fill the skills gap left by even the best cybersecurity contractors available.

Today, Polarys is a trusted provider of bespoke, end-to-end cybersecurity services. We will support your organisation by integrating innovative cybersecurity into your digital transformation project right from the beginning, providing you with long-term protection from the cyber attacks that could otherwise reveal your valuable commercial secrets, decimate your finances or irreparably damage your reputation.

**Hemed**

Creative thinker | Unique outlook on the cybersecurity landscape | Fosters collaboration and leads change by example | 10+ years of cybersecurity experience including in security-sensitive organisations

**Mike**

Implements cutting-edge security concepts and technologies | Seasoned manager | 10+ years of cybersecurity experience including in finance and government
